

AI TO REDESIGN TOURISM · BAGALKOTE 2026

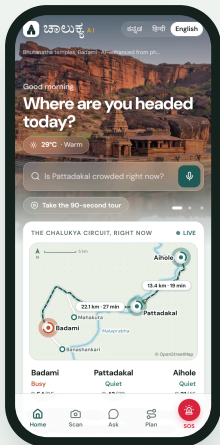

Chalukya AI ಚಾಲುಕ್ಯ AI

One offline-first AI companion for every visitor to Badami, Pattadakal, Aihole and the whole of Bagalkote district, and a live command centre for the people who run it.

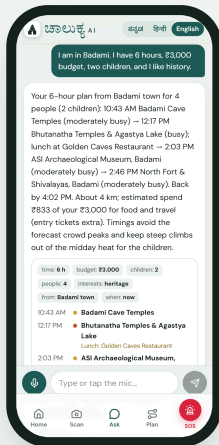

chalukya-ai.vercel.app

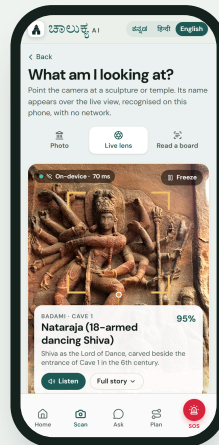

Scan, then tap "Take the 90-second tour". No install; works offline.

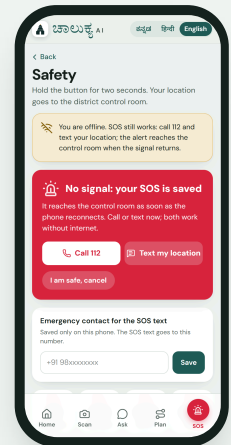

Home and tour
live circuit, 90-second tour

Ask the guide
"6 hours, ₹3,000, two kids..."

Live lens
names sculptures on camera

SOS, no signal
saved, call 112, text location

WHAT IT DOES

Live circuit map

Real roads between the three sites; crowd, free parking and drive time on every pin.

Scan and live lens

25 sculptures and temples named on the phone, offline, even in the live camera view.

Stay and food

Explainable picks by budget, distance and needs; locally owned places first.

Safety and SOS

Hold 2 s to alert the control room. No signal: saved, then call 112 or text your location.

District command centre

Live map, SOS and heat alerts, crowd against capacity, scenario drills.

Ask the guide

Kannada, Hindi or English, typed or spoken; answers only from verified sources.

Read a board

OCR of Kannada, Hindi and English boards; full translation into six languages.

Local livelihoods

Ilkal sarees, Guledgudda khana, local guides and small eateries.

Accessible Bagalkote

Step-free, elder-friendly places and a planner that avoids stairs.

Forecasts and planning

Seven-day footfall with festivals; water, waste, toilets and guides.

Crowd-smart planner

One sentence in, a timed plan out; shares to WhatsApp or opens in Google Maps.

Voice guide

Every story read aloud; switch language in one tap.

Smart parking

Free slots predicted for your arrival time, from slot sensors.

Reviews that matter

Reviews in any language become sentiment and complaint topics per site.

Offline, with a guided tour

Installs in one tap, works in the caves; a 90-second tour for first-timers.

VERSION 1

Working today at a simpler depth, and labelled in the app: stone-crack check from a photo, visitor reports of litter and broken paths, green-stay declarations, safer hours to visit, translate anything, carrying capacity per site. All 20 problem statements of the competition are covered; 11 complete, 9 at version 1.

85.8%

sculptures recognised, unseen photographers

13.1%

footfall forecast error (31.1% last-year baseline)

±3.5

parking slots error, 2 hours ahead

95.8%

questions understood, unseen wording

93.3%

review sentiment accuracy

Honest data. Real: 1,960 CC-licensed monument photos, ASI annual footfall, OpenStreetMap, the district tourism book and website, live weather. Simulated and labelled in the app: the hourly crowd shape (calibrated to ASI totals), parking sensor streams, hotel prices. Home photos are real photographs relit with AI.
